George –

Thank you very much. I appreciate your sending both the sampling results and the analysis. It is good to see that the downwind concentrations are all well below the SGCs.

Do you know what time of day the samples were collected? How did DEC select the DeBlock Road locations (could they smell the “diesel” odor at these locations?)? I note that formaldehyde and acetaldehyde are not on the list – does your lab have thoughts on how to sample for the aldehydes? I appreciate the lab’s estimating the acrolein concentrations. The write-up mentions a comparison with concentrations found in the rest of DEC’s monitoring network – could you send these as well?

Do you have plans to conduct additional sampling? It would be ideal if sampling could be conducted during one of the CTG startups.

- Cynthia
